# Update to Quick Featured Images Pro plugin

The original vendor of this tool sold it to another company and in the process invalidated our license. The transition was not handled well and the code itself is licensed as open source, so we've elected to simply remove the license check.

For ResultFlow hosted blogs (aka, Instablogs) and self hosted "Superblogs" created starting 4-May-2021, this update is already included so no action is required. The zip file attached below is for Instablogs and Superblogs created prior to that date.

quick-featured-images-pro.zip

Step-by-step update process

1. Download the zip file
2. Login to your blog as an admin
3. Go to plugins and select 'add new'
4. Select upload and choose the quick-featured-images-pro.zip file downloaded in step 1
5. Wordpress will tell you it is already installed and give you the option to "Replace current with uploaded". That's the option you want
6. This will retain all plugin settings and no longer require the license key.
